

**70% of web sites are vulnerable to hacking. Is your web site hackable?**

**Find out your website vulnerabilities before it is too late!**

### **What are hackers looking for?**

As many as 70% of web sites have vulnerabilities that could lead to the theft of sensitive company data such as credit card information and customer lists.

Hackers are concentrating their efforts on web-based applications - shopping carts, forms, login pages, dynamic content, etc. Accessible 24/7 from anywhere in the world, insecure web applications provide easy access to backend corporate databases.

### **Firewalls and SSL are futile against web application hacking!**

Web application attacks, launched on port 80/443, go straight through the firewall, past operating system and network level security, and right in to the heart of your application and corporate data. Tailor-made web applications are often insufficiently tested, have undiscovered vulnerabilities and are therefore easy prey for hackers.

Find out if your web site is secure before hackers download sensitive data and endanger your business. Our world-leading Web Vulnerability Scanner will crawl your web site, automatically analyzes your web applications and finds perilous SQL injection, Cross site scripting and other vulnerabilities that expose your on line business. Concise reports identify where web applications need to be fixed, thus enabling you to protect your business from impending hacker attacks!

### **Web Application Scanning for vulnerabilities**

Large number of vulnerabilities and attack modes are known and many more are discovered. Our scanning will help you discover some of them:

- SQL Injection & Cross Site Scripting (XSS)
- AJAX / Web 2.0 web applications
- Legal and Regulatory Compliance
- Google Hacking Database (GHDB)
- Test password protected areas
- Discover directories with weak permissions
- Detect popular web applications (e.g. forums, shopping carts) and detects vulnerable versions
- Detect if dangerous HTTP methods are enabled on your web server.

### **Detailed reports enable you to meet Legal and Regulatory Compliance**

A detailed reports with scanning results will show whether your web applications meet the new VISA PCI Data Compliance requirements amongst others.
